BASIX State of the Art Hackathon — Hacker Pack

Build online, solo or in a team of up to 4, from 18 to 21 October 2026 (EAT), and submit on BASIX.MARKET by 17:59 EAT on 20 October. This pack holds the dates, tracks, rules and support you need, so check here before asking in the chat.

Start here

1. **Open the hackathon page:** https://basix.market/lms/hackathon/2
2. **Join Telegram** (main hub): https://t.me/metta_omniversity
3. **Pick one track and form your team** (1 to 4 members). On your own? Find teammates on the BASIX job board. Your track locks at the Day 1 team check-in.
4. **Read Tracks and Rules** below before you start building.
5. **Builders:** fork the Starter Repo and share your GitHub repo with BASIX.MARKET reviewers.
6. **Submit before 17:59 EAT on Tuesday 20 October.** You can keep editing until then; entries lock themselves at the deadline.
7. **Bookmark this page.** It is updated as things change.

Quick facts

All times are EAT (Nairobi, UTC+3). Lisbon is EAT minus 2 hours.

Item	Detail
Format	Fully online, free to enter. Solo or a team of up to 4. One track per entry.

Item	Detail
Build starts	Sunday 18 October, 10:30 EAT (Day 1 kick-off). Registration closed Friday 16 October.
Build days	18 and 19 October
Polish, record and submit	20 October
Submission deadline (hard)	17:59 EAT, Tuesday 20 October (15:59 Lisbon). Late entries are not judged.
Event ends	Wednesday 21 October, 23:59 EAT. Winner details go to registered participants.
Prize	$560: 1st $170, 2nd $140, 3rd $110, 4th $70, 5th $70.
Tracks	4: Harlem Fine Art and AI for Peace, MeTTa and Omega, Hack Ready Projects, BASIX.MARKET Builds
Every participant gets	A certificate and Participation Badge

What you're building with

MeTTa is a programming language for AI that reasons: your program holds knowledge, applies logic to it, and shows how it reached a conclusion instead of acting as a black box. **Hyperon** is the engine that runs it. **Omega** is an agent framework built on MeTTa that gives agents memory, auditable reasoning, and the ability to update their own rules.

Generative AI guesses. MeTTa reasons. Omega remembers, and shows its work.

Artists and musicians do not need to code: Track 1 is for you, and the job board can pair you with a builder. Courses and MeTTa resources are on BASIX.MARKET https://www.basix.market/lms , along with SingularityNET platform access.

Tracks and problem statements

Pick one track and one challenge. Every track ships real IP. Incubation and integration are assessed separately and require agreement. Partner creative briefs are challenge concepts pending partner sign-off.

Track 1: Harlem Fine Art and AI for Peace (Creators)

For painters, illustrators, digital artists, musicians, producers and performers making work with AI for peace, after the Harlem Fine Arts Show 2026 theme: Art as Healing. History as Power. Legacy in Motion. Partners: HFAS, Harlem CLxR, Incantio.
Choose one:

- **AI as creative partner:** make a work with AI as co-creator, and show the conversation.
- **Legacy in motion:** a work, song or performance that evolves with its audience.
- **The borderless studio:** two artists, Harlem and Nairobi, one piece in real time.
- **Peace, love, unity:** a piece in the spirit of the AI for Peace collection.
- **Co-own your work:** a phigital piece (physical and digital linked) with on-chain provenance and royalty terms agreed in advance.

Musicians, with Incantio.com (artist-owned, artist-priced music licensing). Challenge concept, subject to partner confirmation and rights-holder permission: finished tracks may be listed on incantio.com.

- **License-ready from day one:** finish a track with stems, metadata and split sheet.
- **The split sheet in the session:** co-write live while an agent records who wrote what.
- **A sync-ready score:** score the AI for Peace artworks, one cue per image, each potentially licensable via Incantio (challenge concept, subject to partner confirmation and rights-holder permission).
- **A song across borders:** a Harlem and Nairobi co-write with co-writer splits recorded.

Deliverable: finished piece, 3-minute process video, and an artist statement with AI disclosure.

Track 2: MeTTa and Omega (Builders)

One challenge per team. Levels run from MeTTa Foundation (Level 1) to Advanced, and every challenge has an art brief. Collaborating teams submit separate entries, each in one track, and are judged independently.

MeTTa Foundation (Level 1)

- **The Glass Box Agent:** every decision comes with a reasoning trail anyone can challenge. HFAS brief: a jury assistant that shows why an artwork was selected.
- **The Agent That Grows Up:** starts with a small rule set and visibly learns; show the diff. Incantio brief: a composing agent that learns a style and writes the split sheet.
- **MeTTa Core Challenge:** one small feature: patterns, knowledge, inference or rule learning. AI for Peace brief: a knowledge graph of the AI for Peace artworks and artists.

Omega AI Agents (Levels 1 to 3)

- **Two Agents, One Truth:** two agents disagree about a fact and reason to a shared answer. AI for Peace brief: two communities' accounts of one event, mediated to one story.
- **The Agent Without Borders:** reasoning that holds across languages, literacy and connectivity. Harlem CLxR brief: carry artist statements between Harlem and Nairobi.
- **BASIX.MARKET Mature Build:** a working module for the BASIX NFT Marketplace. AI for Peace brief: phigital editions of AI for Peace works, royalty terms to be agreed with artists.

Next Level Devs (Advanced)

- **Trusted With Money:** a business decision with an audit trail a manager could override. HFAS brief (concept): approve fractional-ownership and royalty payouts for #BuyBlackArt.
- **The NPC That Won't Break Character:** maintains consistent character and memory across documented tests. Incantio brief: a band-mate who remembers every co-write and who is owed what.

AI Infrastructure Layer (Advanced)

- **Build the AI Infrastructure Layer:** live MVP work on GitHub with Omega: scale support, CTO agent or RWA (real-world assets). Harlem CLxR brief: cultural-IP and real-world-asset rails for Harlem and Nairobi.

The advanced challenges are for teams with prior hackathon or Sprint experience, or a completed MeTTa track or BASIX.MARKET coursework. Stack: MeTTa, Hyperon and Omega. Deliver a working repo shared with BASIX.MARKET, docs and a 3-minute video.

Where to build:

Area	Challenge concepts
Music licensing	Rights as rules (splits, territories, sync terms in MeTTa with the clause trail); the living

Area	Challenge concepts
	split sheet; one-click sync via Incantio (challenge concept, subject to partner confirmation and rights-holder permission)
Music business	Royalty reconciliation; a deal explainer in plain language or Swahili; splits you can watch
Art provenance	Ownership history as a graph with gaps marked; glass-box attribution; resale royalties where agreed
Archives	The archive that grows up (18 seasons of HFAS); an oral-history layer under consent rules; footage rights
Exhibitions	Curatorial co-pilot; a gallery guide with memory, in the visitor's language; a rights checker for loans, insurance and image rights

Track 3: Hack Ready Projects (Open)

For builders who bring a project ready to keep expanding. Extend an existing project. Identify the starting version and document the work completed during this hackathon. Judges assess the new contribution. The same judging criteria apply as in the other tracks.

Track 4: BASIX.MARKET Builds

Incubation and integration are assessed separately and require agreement. Deliverable: a working feature or module on a GitHub repo shared with BASIX.MARKET, plus a 3-minute video.

Brief A, The Job Board. Build the board that builds the teams. Choose one:

- **Team-matching agent:** matches a brief to builders by verified skills and explains every match.
- **Skills that prove themselves:** reads MeTTa and Omega badges (I to III) and gates briefs by level.
- **The brief writer:** turns an artist's idea into a scoped brief with budget, level and timeline.
- **Reputation with memory:** an Omega agent that remembers who delivered.

Brief B, Managing originals: Art IP and Music IP. The original never moves. Proof, permissions and income travel, and every rights holder is on the record. Build one stage:

- **Register:** hash the file or photos of the work and register its provenance with permission, even if the artist opts out of sales.
- **Prove:** a MeTTa graph of who made it, when, with whom and which AI tools, with gaps flagged.
- **License:** who may use it, where and for how long, with the clause trail. AI training is opt-in only.
- **Earn:** one split sheet for every co-writer, signed in the session; royalty payment only where agreed.
- **Protect:** an Omega agent remembers every licence and flags any use never cleared.

Ownership principles: nothing is used or trained on without consent; builders, BASIX.MARKET and GTM brokers are each named on the record; provenance registration requires permission; splits are agreed before anything is built. For Art IP, the physical original stays with the artist or gallery and a phigital twin is linked to it, never replacing it. For Music IP, master and composition are tracked apart and stems stay in a private vault.

Rules, submission and judging

Organisers can disqualify an entry that breaks these rules, and their decision on scores and winners is final.

1. **Solo or team.** Enter solo or in a team of up to four. Each entry selects one track.
2. **Register properly.** Every member has a BASIX.MARKET profile, with an institution or "Independent."
3. **Disclose your AI use.** Which tools, for what. Using AI is allowed; hiding it is not.
4. **Show the work.** Builders submit a working GitHub repository with access for BASIX reviewers. Creators submit the finished piece.
5. **Use data with permission.** Incantio, AI for Peace, HFAS or Harlem CLxR samples only

with the rights holder's consent.

6. **Respect other people's work.** Identify prior work and reused material, and credit it. Open source keeps its licence.
7. **Filming needs consent.** Ask before filming, and again before footage is published.
8. **Meet the deadline.** Submissions close 20 October, 17:59 EAT (15:59 Lisbon). Late entries are not judged.
9. **Be decent.** Harassment, discrimination or misuse of others' work ends an entry.
10. **Code, IP and commercial pathway.** By participating in the hackathon, developers build through BASIX.Market and retain ownership and authorship of the original code and IP they create. BASIX/XR retains the agreed rights necessary to host, display, test, demonstrate and continue developing the project through the platform, while public repositories may allow others to view, use or contribute to the code under the applicable open-source license. If a project demonstrates viable commercial potential, BASIX/XR and the developer or team may elect to move it into a separate commercial pathway, including incubation, investment or fundraising. Any commercial ownership, equity, revenue participation, licensing or transfer of IP would be agreed separately in writing before commercialization.

Submission: all required

1. A working GitHub repo shared with BASIX.MARKET (builders) or the finished piece (creators).
2. Short written documentation: what it does, how it works, what's next, plus your AI-use disclosure.
3. A 3-minute maximum video: show it working (or the process, for creators) and say what you'd build next.
4. Submission before 17:59 EAT on 20 October.
5. A BASIX.MARKET profile with your institution declared, or "Independent."

Judging criteria (all tracks)

Weight	Criterion
30%	Technical or creative execution

Weight	Criterion
25%	Clarity of the 3-minute video or demo
25%	Fit to track
20%	Collaboration and documentation

Incubation suitability is assessed separately as a follow-on step. It is not an additional score. We'll ask for your consent before recording or publishing footage. Ship something that works: judges weigh usability and completeness over ideas.

How to use the BASIX platform

1. **Go to https://basix.market/lms/hackathon/2 to manage your entry.** Registration closed on 16 October; make sure your institution (or "Independent") is on your profile.
2. **Solo?** You enter as a team of one. Pick your track and challenge like everyone else.
3. **On a team?** Add your team name, choose your track, and add every teammate. They need a BASIX.MARKET profile.
4. **Need teammates?** Use the BASIX job board. Artists and builders can pair up. Collaborating teams submit separate entries, each in one track, and are judged independently.
5. **Set your project stage** (just an idea, planning and design, early build, or working prototype) and add your GitHub link once you have one.
6. **Open your entry** with the "Open your entry" button and keep editing until the deadline.
7. **Submit** your repo or piece, documentation and video before 17:59 EAT on 20 October. Entries lock automatically.

Schedule

Sessions are online and all times are EAT (Nairobi, UTC+3). You build independently between check-ins, so you are not expected on camera continuously. Further session times are shared in Telegram and on the hackathon page.

Date	Time (EAT)
Sun 18 Oct, Day 1	10:30, kick-off
Mon 19 Oct, Day 2	15:00, mentor session (Zoom link)
Tue 20 Oct	17:59, submission deadline
Wed 21 Oct	23:59, event ends

FAQ

Does it cost anything? No. It is free to enter.
Do I need a team? No. Enter solo or in a team of up to four. Find teammates on the BASIX job board if you want them.
I'm not a coder. Can artists and musicians enter? Yes. Track 1 is for you. You can also team up with a builder through the job board.
Can I enter more than one track? No. Each team enters one track.
I took part in the last BASIX hackathon. Can I join? Yes. Builders from the BASIX Omniversity Hackathon and Cohort 2 who have built something can join.
Is it in person or online? Fully online.
What's the actual deadline? 17:59 EAT (15:59 Lisbon) on Tuesday 20 October, for everyone. Late entries are not judged.
Where do I add my institution? On your BASIX.MARKET profile. Choose "Independent" if you have none.
Which tools will builders use? MeTTa, Hyperon and Omega, plus any outside AI tools, disclosed in your documentation. Resources are on BASIX.MARKET.
What does "incubate" mean? A separate commercial pathway that BASIX/XR and the developer or team may elect to enter if a project shows viable commercial potential, including incubation, investment or fundraising. Any commercial ownership, equity, revenue participation, licensing or transfer of IP would be agreed separately in writing before commercialization. See rule 10.
Do I get a certificate? Yes. Every participant receives one.
What if I win? Winner details go to registered participants on 21 October. This round awards

$560 across five places.

Need help? Ask in Telegram (https://t.me/metta_omniversity), use the live Help Desk on BASIX.MARKET during the hackathon, or email office@basix.market.

Hosts, judges, support and partners

Need help during the build? Ask in Telegram, use the live Help Desk on BASIX.MARKET, or email office@basix.market .

Hosts

Name	Role
Nefertiti Strong	Co-Founder, CVO and COO, XRAgency and BASIX (Kick-off Host)
Sheila Wanjiru	Head of Business Development, XR Agency (Virtual Host)
Shiva Shukla	Head of Design, Blockwee (Live Host)
Prateek Choudhary	Hackathon Help Desk, HackIndia national winner

Judges

Name	Role
Dr. Ben Goertzel	CEO and Chief Scientist, SingularityNET
Haley Lowy	Chief of Staff, SingularityNET and BGI
Rafael Presa	AI Community Strategy, SingularityNET and BGI

Name	Role
Nefertiti Strong	Co-Founder, CVO and COO, XRAgency and BASIX
Saskia Betz	Co-Founder, CEO and CMO, XRAgency and BASIX
Richard E. Pelzer II	Culture, Art and Community; Founder, HarlemCLX
Rosy Salutem	Chief of Staff, XRAgency and BeyondTheCode
Yeabesera Derese	Lead Developer and CTO, SingularityNET
Samuel Wondimagegnehu	Lead Developer, SingularityNET
Surafel Fikru	Software and AI Engineer, SingularityNET
Luvai Darwajawala	Co-Founder and COO, Blockwee
