Make It Together.
Split It Fairly.

Two AI agents settle who wrote what in a co-written song, prove they agree, and get the split signed in the session.

State of the Art Hackathon 2026 · Track 2: Omega AI Agents · Team Technetians

The Problem

When co-writers remember a song differently, nobody gets paid.

$424M

in unmatched US streaming royalties handed to the Mechanical Licensing Collective in 2021

KSh 75.7M

under-distributed by one Kenyan collecting society between 2020 and 2022

10%

what co-writers of Tyla's hit "Water" say they were offered for their work

One Song, Two Memories

Wanjiru hummed the hook in Nairobi. Malik built the beat in Harlem.

Wanjiru's version

40 / 60

"The hook came from my voice memo. I started the melody."

Malik's version

22.5 / 77.5

"I built the beat and finished the hook in my session."

A buyer wants to license "Amani Ni Sisi". Until they agree, the deal waits.

The Solution

Each writer gets an agent. Both agents reach the same split, on their own.

Every share explains itself, either writer can challenge any evidence, and nothing counts until both sign.

How It Works

Four Steps To A Signed Split

1

Bring Your Side

Voice memos, project files, lyric edits and chats. Each agent knows only its owner’s side.

2

Share Evidence

The agents swap file fingerprints and messages. Never the audio itself.

3

Find The Split

Each agent weighs the evidence alone, then both compare answers and proof IDs.

4

Sign Together

Both writers sign. The record names every rights holder and carries an AI disclosure.

The Answer

Two Agents. One Split. Same Proof.

Wanjiru · Nairobi agent

39.7%

Malik · Harlem agent

60.3%

Both agents produce the **same agreement ID** (a SHA-256 hash of the proof). Malik challenges his own chat message, both recalculate, and the answer holds.

Fair By Evidence

Every share can be explained, challenged and signed.

See Why

Plain reasons for every share, in English or Kiswahili. One switch shows the full reasoning.

Challenge Anything

Withdraw any piece of evidence and watch both agents recalculate in seconds.

Sign On The Record

Nothing counts until both writers sign. The record gets its own ID.

Made For How Music Is Made Now

AI parts are disclosed, and owned by no one.

15

Points Left Unowned

The drum groove came from an AI generator. Malik is credited only for his edit, and human shares are scaled to 100.

Voice Needs Consent

A voice model of Wanjiru was used for a demo. Signing is blocked until her recorded consent is present.

Disclosed On The Record

The signed split sheet lists every AI tool used and what it made, so buyers know before they license.

Under The Hood

Built On SingularityNET Omega

Omega capability	In Sawa
lib_nal.metta v0.1.20, unmodified	Each piece of evidence gets its truth value from NAL deduction, merged by NAL revision
Rules as versioned atoms	Three defeaters and the split policy live in pack split-v1. A version mismatch blocks agreement
Memory with episodic replay	Each agent's append-only memory is replayed into its own MeTTa atom space
Action threshold (f ≥ 0.6, c ≥ 0.5)	Only settled statements produce shares
Auditable inference	Reasons per share and SHA-256 proof hashes that must match

Jev reads. Omega decides. The writers confirm. No language model decides or explains a share. 22 tests pin the reasoning.

A Full Product, Live Today

Built from user-journey research for five audiences.

For Artists

What to bring, how splits are weighed, answers to common questions.

For Platforms

List only songs whose splits are settled, with a signed record.

For Developers

API reference, a live console and examples in three languages.

Plus Product, Technology, Trust And Safety, About, and a guided demo in English and Kiswahili.

What's Next

From Two Writers To The Whole Room

More Writers

Splits for full writing rooms, with live capture during the session.

Audio Evidence

Audio as truth-valued input, and agents that run on the artist's own device.

Get Paid Right

Royalty statements checked against the signed split, and export to collecting societies.

Incantio and BASIX.MARKET integration are concepts pending partner confirmation.

See It Settle A Real Split.
